Emerson, this is your start-to-finish guide to developing Web-based applications using J2EE 1.3 (with references to 1.4 features) and the new BEA WebLogic Server 8.1. One step at a time, and one technology at a time, the authors walk you through building a complete, robust Web application. You'll prototype user interfaces, code server-side presentation logic and JSPs, implement database connectivity, establish central registries, provide JMS messaging, code EJBs, even integrate email facilities. Along the way, you'll discover how each module fits into your overall application design, as you learn best practices for enhancing availability, reliability, and security. Coverage includes: Leveraging the Model-View-Controller (MVC) design pattern Using JDBC and BEA WebLogic's transaction support to integrate enterprise databases Preparing your applications to run in clustered BEA WebLogic Server environments Developing EJBs that fully leverage BEA WebLogic Server's container services Best practices and guidelines...
